

PRODUCT INFORMATION PRE-SEPARATOR

Pre-separation of liquids and coarse material during pond cleaning with the FANGO 2000

Pre-separators are a practical aid for pond cleaning, reducing wear and tear on the pond suction cleaner, filtering the water sucked in and separating coarse particles. Only suitable for pond suction cleaners and not for pumps!

- Minimised equipment wear
- Separation of liquids and other materials
- Easy disposal

The pre-separator separates heavier materials that are sucked in, such as stones, leaves or pine cones, and much more. It also separates pond animals such as frogs and newts, which would possibly die if they were to get into the pond suction cleaner. The pre-separator collects this material and prevents it from being pumped through the pond suction cleaner. This also protects the machine.

The pre-separator is flexible and can be used in two variants. A sponge filter is included in the scope of delivery. With the sponge filter, the water can be coarsely filtered back into the pond, which is very helpful, for example, in autumn when leaves have just fallen. Basically, however, the pre-separator is not suitable for filtering very small suspended matter. If you want to return very well filtered pond water to the pond, you need a separate filtering device such as our TEICHMAX.

The pre-separator is coupled on the suction side of the pond suction cleaner with the short hose supplied between the suction hose and the pond suction cleaner. The pre-separator is ready for use within a short time without much effort. Please note that you should not use the pre-separator in the blazing sun. Exposure to the sun and the resulting heat can deform the pre-separator and cause damage.

Explanation of the pre-separator

- A: Pre-separator barrel
- B: FANGO 2000 (not included in delivery)
- C: Cover
- D: Connection for suction hose of FANGO 2000 on the suction side (German: Saugen)
- E: Included connection hose, connection on the drain side (German: Ablauf)
- F: Pre-separator barrel without filter sponge
- G: Pre-separator barrel with inserted filter sponge
